

FERNBRAE MEADOWS

“ I feel like I can contribute to making a difference in the area ”

Nicole Digruber

I was really happy when I found out that the old golf course wouldn't just be another building site for houses. I have been using the greenspace for the last few years a lot as I walk my dogs there and also spend some time there observing wildlife. I enjoy being part of the 'Friends of' group as I get to meet a lot of like-minded people and feel like I can contribute to making a difference in the area.

“ I have 2 children and now they have a space within walking distance where they can run around, learn, join events, explore and just be children ”

Regular events in the meadows are connecting people to nature

35%

of locals visit the meadows at least once a week

55% walk to the meadows

WHAT IS GREEN INFRASTRUCTURE?

Green infrastructure (GI) is multi-functional greenspaces that provide community benefits, help adapt to and mitigate climate change, increase biodiversity, improve air quality and reduce flooding. GI close to where people live can provide economic and health benefits and enhance their quality of life.
