EU-Funded Nature-based solutions research projects

addressing Societal Challenges across Ecosystems

The European Commission defines Nature-based solutions (NBS) as "solutions that are inspired and supported by nature, which are cost-effective, simultaneously provide environmental, social and economic benefits and help build resilience". NBS must benefit biodiversity and support the delivery or a range of ecosystem services.

Such solutions bring more, and more diverse, nature and natural features and processes into cities, landscapes and seascapes, through locally adapted, resource-efficient and systemic interventions. This definition is aligned with the **IUCN** and the recently internationally adopted **UNEA-5** definition.

NetworkNature is a resource for the nature-based solutions (NBS) community, creating opportunities for local, regional and international cooperation to maximise the impact and spread of nature-based solutions. The project is funded by the European Commission under the Horizon 2020 programme.

NetworkNature synthesizes & strengthens the Nature-based Solutions evidence base by gathering experiences, knowledge, tools and services from 44 Horizon 2020 and Horizon Europe projects. The objective of this visualisation is to provide a clear overview of the EU NBS research projects, the ecosystems they target, and the societal challenges addressed.

Nature-based solutions across Ecosystems

The ecosystems typologies addressed by the projects were listed based on the policy report "Mapping and assessment of ecosystems and their services (MAES): An EU Ecosystem Assessment Report". The classification has been slightly adapted for the purpose of this visualisation.

Addressing Societal Challenges

12 societal challenges were considered for assessment, based on the European Commission's publication "Evaluating the impact of Nature-based solutions: A handbook for practitioners", which was the result of a collaboration of 17 EU NBS projects. Some societal challenges have been slightly modified to broaden their scope beyond urban ecosystems.
